New Sandbox Environment & Updated EPP Poll Messages – Feedback Welcome

Dear Registrars,

We are pleased to inform you that we today have released a new version of our Sandbox environment.

This new setup enables us to:
- Develop new EPP poll messages
- More easily fix and improve existing EPP functionality, including upcoming NIS2-related features

Alongside this update, we have also revised the content of several existing poll messages. These updated messages now include more resData, making them more specific and informative compared to the previous versions.

Please note that this is just the first step – further new poll messages and refinements are planned.
You can review the updated poll messages here:

Updated poll messages:
https://github.com/Punktum-dk/epp-service-specification/blob/5.0/Poll-Message-Reference-Guide.md

Our plan is to deploy the new poll messages to the production environment by the end of August. This means the timeframe for making any necessary adjustments on your side will be relatively short.

If you have any concerns about handling the updated poll messages by the end of August or are foreseeing any impact on your workflows, please feel free to let us know.
Your feedback will help us plan the rollout and schedule future NIS2-related features in a way that works best for you.

Thank you in advance, and don't hesitate to reach out if you have any questions.

Med venlig hilsen / Best regards

Mathias Baltsen
